Anastasis Giakoumatos

Software Engineer

Athens, Greece anastas.giakoumatos@gmail.com +306984470943 anastasis-giakoumatos agiak

Summary

Senior Android Developer with nearly 7 years of experience delivering production-grade mobile applications across fintech, banking, and igaming domains. Proven track record leading modularization efforts, mentoring developers, and driving code quality in large cross-functional teams. Proficient in Kotlin, Jetpack Compose, and modern Android architectures, with a pragmatic approach to leveraging AI-assisted development tools to accelerate delivery and improve code quality.

Experience

Cognity *(B2B Contract)*, Senior Android Developer — Athens, Greece, November 2025 – Present

- Working on the Eurobank mobile banking application within a team of 35–40 Android developers, contributing across multiple domains including payments, onboarding, and insurance contracts
- Led a large-scale modularization effort, migrating 1,500+ files and creating 10+ new modules to improve scalability, build times, and separation of concerns
- Established unit test coverage across previously untested modules, significantly improving the project's overall testing baseline
- View on Google Play

BetssonGroup, Senior Android Developer — Athens, Greece, January 2024 – November 2025

- Contributed to the native Android migration of the Sportsbook product using Jetpack Compose and MVI architecture, replacing WebView-based screens to improve performance, UX, and maintainability, within a team of 20–25 Android developers operating under both Scrum (2-week sprints) and Waterfall methodologies
- Maintained a sub-3% QA rejection rate through rigorous local testing and proactive collaboration with the QA team
- Monitored and maintained live Sportsbook app stability, achieving 96% crash-free sessions over the past 6 months
- Reviewed 50+ pull requests per quarter, enforcing best practices and code consistency across the team
- Leveraged AI-assisted development tools (Cursor, GitHub Copilot) with Claude and Gemini models to accelerate feature development, improve code quality, and reduce implementation time
- View on Google Play

Viva.com, Android Engineer — Athens, Greece, October 2022 – January 2024

- Contributed to the Viva.com Terminal application, serving over 1M users across 10+ European countries, within a team of 15–20 Android developers following Waterfall methodology
- Implemented full tablet and landscape support across 35+ screens, enabling the application to expand to new device categories including cash machines and vending machines
- Developed Kiosk mode in Kotlin, enabling secure and restricted device usage in controlled environments
- Led the application's rebranding effort, updating UI components, animations, and

assets to align with the new brand identity
- View on Google Play

M-Stat, Android Engineer — Athens, Greece — October 2019 – October 2022

- Developed and maintained 15+ Android applications in Kotlin and Java across insurance and loyalty domains
- Delivered multiple applications end-to-end, from requirements gathering to production, including:
  - **KRAFT Pro App** – winner of the Impact Bite Awards 2021
  - **Piraeus Bank Yellow App** – ranked among the top banking apps in Greece on Google Play for 5 consecutive years
- Took on a tech lead role for one year: contributed to project estimations, communicated directly with clients, and mentored junior developers through code reviews
- Served as sole Android developer on multiple projects, designing and building apps with MVVM, Coroutines, Flow, and Room

Projects

Honestli – Digital Verification App *(Freelance)*

- Developed as a freelance Android developer a digital verification application designed to combat misinformation
- Implemented tamper-proof "Digital Originals" with embedded C2PA metadata and blockchain anchoring, showcasing advanced knowledge of content authenticity standards
- Enabled secure, authenticated sharing of photo and video content directly with newsrooms while preserving user privacy
- View on Google Play

Cariboo – Car Management & Tracking App *(Personal Project, coming soon)*

- Sole developer of a feature-rich car management app enabling owners to track fuel refills, calculate real-time consumption, and monitor all vehicle-related expenses (insurance, parking, tolls, maintenance)
- Built an interactive statistics dashboard with charts and trends to give users clear insights into their spending and driving habits
- Developed primarily through AI-assisted workflows, using the project as a hands-on exploration of modern AI-accelerated Android development

Skills

Languages: Kotlin, Java
UI: Jetpack Compose, XML Layouts
Architecture: MVI, MVVM, Clean Architecture, Multi-module
Async: Coroutines, Flow, RxJava
Testing: JUnit, Mockito, Turbine
AI Tools: Cursor, GitHub Copilot, Claude, Google Gemini
Dev Tools: Android Studio, Git, Jira, Figma, Firebase
Cloud & CI: Azure
Methodology: Agile/Scrum, Waterfall, Code Reviews, Cross-functional Collaboration
Spoken Languages: Greek (Native), English (C2 – Michigan ECPE Certificate)

Education

BSc **Athens University of Economics and Business**, Computer Science — Sept 2015 – May 2020

- **GPA:** 7/10 (Greek grading scale)
